

DHEC ASSESSMENT

DHEC developed three COVID-19 metrics that categorize communities into low, medium, or high risk. The three metrics are:

01

- Two-week cumulative incidence rate
- Trend in incidence rate
- Two-week percent positive rate

These metrics are used to determine an overall disease activity level for each county. For Richland County as of July 5, 2020:

02

- Incidence rate = High
- Trend: Increasing = High
- Percent positive rate = High
- Overall rating = High
